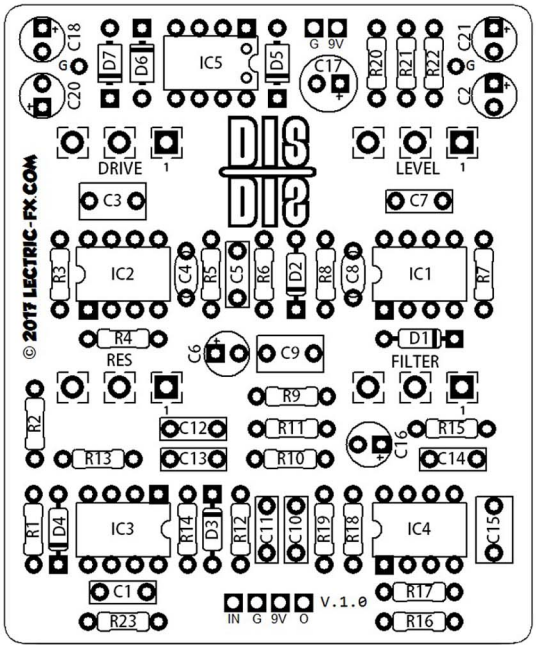
MXR Distortion II™ 06/24/2017



DESCRIPTION:

The DisDis is a true bypass clone of the MXR Distortion II ™ that was manufactured between 1978 and 1984. It used a transformer and ran at 15v. We substitute a charge pump for 18v operation
Fun fact: Billy Corgan used this to push a muff for some of his early pumpkin tones. Or so the story goes...
This is a pretty easy project for most builders, employing pc mounted pots, and designed for a 125B with top mount jacks.

CONTROLS:

LEVEL- Increases or decreases volume.

DRIVE- Increases or decreases gain/drive.

FILTER- A treble cut.

RESONANCE- Blends in a 2nd overdriven signal of an altered frequency.

BOM:
